

# PROACTIVE LEVEL OF CARE DETECTION IN SENIOR LIVING WITH AKSSI

**Akssi (pronounced “AHK-see”)** is an intelligent virtual assistant developed by BUDS Technology with the ability to support daily resident assessments in senior living communities.

Known for its tailored approach to the aging population, Buds Technology works with Senior Living Facilities for better resident care at optimum cost

## Challenges

Too often, changes in residents' care needs go undetected in senior living facilities — leading to preventable ER visits, staff burnout, and financial loss.

## Solutions

developed by BUDS Technology, Akssi integrates seamlessly into existing EHR systems to deliver daily mini-assessments that detect early signs of health decline — before it becomes a crisis.

## Results

15%

of residents flagged for 1–2 higher care levels

3  
WEEKS

Residents saw these care level improvements

42%

of assisted living residents have unmet care needs (National Library of Medicine)

## Conclusion

By using Akssi, The Carriages improved resident outcomes, operational efficiency, and revenue. As COO Brenda Yanosik noted, Akssi transformed care delivery and communication across their facility.
